beta!

Bolt 4
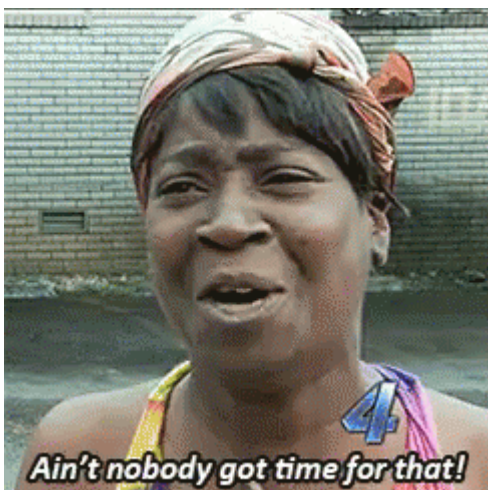

An open source, adaptable platform for building and running modern websites. Built on PHP, Symfony and more.

Bolt

Bolt is a fully open source, adaptable platform for building and running modern websites. It's built on PHP, Symfony, Doctrine, Twig, API-Platform and more. Bolt can be used as a traditional CMS or headless/decoupled. It is fully multilingual, and extensible using custom code in your projects, or through extensions installed from the Composer ecosystem.
